

PROJECT > Long Beach Towers

Deck Mud
Long Beach, CA

PROJECT DESCRIPTION:

QUIKRETE® Deck Mud was used as the underlayment base for the 12,000 square foot Long Beach Towers courtyard renovation. The Deck Mud was floated level to an average thickness of 2" over the existing cast-in-place concrete deck. Then, 8' x 8' quarry tile was installed over the entire exterior deck.

QUIKRETE® Deck Mud is a portland cement based underlayment mortar for leveling floors, decks and countertops prior to tile installation. The materials' low-sag characteristic makes it ideal for use with heavy stone tile. Deck Mud can be used for interior or exterior applications and is proportioned in accordance with ANSI A-4.1a.2.2.1 specifications.
