

PROJECT > Marlins Park

Mason Mix & Core-Fill Grout
Miami, FL

PROJECT DESCRIPTION:

Marlins Park, the new home of the Miami Marlins, breaks the mold of Major League Baseball's "retro-look" baseball parks. The contemporary design features a 5 acre retractable roof, an aquarium inside the walls of the home plate backstop and a nightclub and swimming pool just beyond the left field wall. The \$640 million, 37,000 seat stadium was built on the site of the old Orange Bowl in the area known as Little Havana and offers a panoramic view of downtown Miami.

QUIKRETE® supplied the masonry sub-contractors on the project with more than 27,000 – 80 lb bags of Mason Mix – Type S for use in the construction of all load-bearing and non-structural masonry walls throughout the stadium. QUIKRETE® Core-Fill Grout – fine was also used to fill the cavities of the structural walls. QUIKRETE® also provided 4950 bags of 80 lb Mason Mix – White, formulated with an Integral Water Repellent (IWR), for setting more than colored glass block. The QUIKRETE® IWR additive resists the penetration of water from wind-driven rain.

QUIKRETE® Mason Mix is a high-strength, Commercial Grade, Type S mortar mix that achieves a compressive strength of more than 1800 psi at 28 days and exceeds the requirements of ASTM C 270 and ASTM C 1714.

GENERAL CONTRACTOR:

Pompano Masonry (Masonry Sub-Contractor)
Allen W. Smith (Masonry Sub-Contractor)

QUIKRETE® PRODUCTS USED:

- 80 lb Mason Mix - Type S: 27,177 bags
