Preparatory Work

Prepare the paver base with QUIKRETE® Patio Paver Base Sand to provide proper drainage characteristics. Pavers must have a clean and dry surface for proper application.

- Compact sand into joint spaces as thoroughly as possible
- Remove excess sand from the paver surface prior to dampening.

Dampening

With a garden hose, apply a gentle fine mist to the filled joints. Repeat dampening at regular intervals for the first hour after placement.

NOTE: Avoid over-watering joints. Maintain the joint in a damp condition without flooding or washing the Joint Locking Sand away.

Precautions

Protect from freezing. Plastic sheeting and insulation blankets should be used if

temperatures are expected to fall below 50°F (4°C) during the first 48 hours.
